Target Information

Protein Name	Tubulin gamma-1
Gene Name	*TUBG1*
Domain	NA
Background	γ-Tubulin localizes to centrosomes and acts as core component of γ-TuRC microtubule-nucleation complex, initiating microtubule assembly. It concentrates at centrosomes during interphase and organizes spindle poles in M-phase to govern spindle-microtubule formation. γ-Tubulin is well-established centrosome marker. Dysfunction of γ-tubulin causes spindle defects and chromosome-segregation errors, driving genomic instability.
