Target Information

Protein Name	Marker of proliferation Ki-67
Gene Name	*MKI67*
Domain	human Ki-67, aa 1200-1400
Background	Ki-67 (Marker of proliferation Ki-67) is a catalytically-inactive nuclear protein tightly coupled to cell-cycle progression. It supports chromosomal architecture in proliferating cells. Ki-67 is present during G1, S, G2 and M phases but nearly absent in quiescent G0-phase cells. Its staining index directly quantifies cellular proliferation rate. In clinical pathology, Ki-67 labeling index is a key parameter to assess tumor proliferative potential and malignancy.
