Target Information

Protein Name	mTOR (phospho Ser2481)
Gene Name	*MTOR*
Domain	NA
Background	mTOR (mammalian target of rapamycin) is a serine/threonine kinase belonging to the PI3K-related kinase family. It functions in two complexes, mTORC1 and mTORC2, governing cell proliferation, metabolism, autophagy and protein synthesis. Ser2448 and Ser2481 are two critical phosphorylation sites on mTOR. Phosphorylation at Ser2448 is predominantly mediated by AKT and serves as an activation marker of mTORC1 upon growth factor stimulation. Ser2481 is an autophosphorylation site reflecting intrinsic mTOR kinase activity and exists in both mTORC1 and mTORC2.
