Target Information

Protein Name	Mitogen-activated protein kinase-14 (p38-α)
Gene Name	*MAPK14*
Domain	NA
Background	p38 MAPK (Mitogen-activated protein kinase 14) belongs to MAP kinase family and transduces cellular stress, inflammatory, apoptotic and differentiation signals. p38 is a serine-threonine kinase activated via upstream MAP2K-mediated dual phosphorylation upon pro-inflammatory cytokines, oxidative stress, UV irradiation and osmotic challenge. Activated p38 translocates into nucleus and phosphorylates transcription factors to modulate transcription of pro-inflammatory, apoptotic and cell-cycle target genes. It mediates innate immunity and cytokine production, as well as cell differentiation and senescence. Sustained p38 signaling contributes to autoimmunity, inflammatory disorders and tumor progression.
