Target Information

Protein Name	CD86 molecule
Gene Name	*CD86*
Domain	human CD86, aa 115-185
Background	CD86 (Cluster of differentiation 86, B7-2) belongs to B7 co-stimulatory superfamily and delivers co-stimulatory signals for T-cell activation. Predominantly expressed on antigen-presenting cells including dendritic cells, macrophages and B-cells, CD86 maintains low basal expression and is strongly up-regulated upon inflammatory stimulation. It engages T-cell surface CD28 to deliver positive co-stimulation, cooperating with MHC-TCR signaling to drive T-cell proliferation, differentiation and cytokine secretion for adaptive immunity initiation. CD86 also binds CTLA-4 to transmit inhibitory signals for immune homeostasis.
