Target Information

Protein Name	β3-tubulin
Gene Name	*TUBB3*
Domain	NA
Background	β3-Tubulin (TUBB3) is β-tubulin isoform, neuron-specific cytoskeletal protein that assembles neuronal microtubules and regulates axon outgrowth, neuronal migration and differentiation. Predominantly expressed in mature neurons, β3-Tubulin serves as classic neuronal biomarker. Aberrant TUBB3 overexpression in tumours confers reduced sensitivity to microtubule-targeting chemotherapeutics and correlates with clinical drug resistance.
